Michael Gallegos Colorado Springs, CO Phone: (719) 673-5372 Email: gallegosmike1997@gmail.com GitHub: github.com/gallegosmike1997 Portfolio: https://michael-gportfolio.vercel.app/ Hello, thank you for your time, and consideration. It's my hope that through this portfolio I may be able to provide a clear understanding of my skills and experience. As I am self-trained in multiple disciplines of engineering. I am passionate about building complete systems that integrate hardware, software, and AI to solve real-world problems. My work spans mechanical design, electrical engineering, embedded systems, and full-stack application development. I lack the traditional academic credentials to formalize my engineering knowledge. Nevertheless where I lack in my formal educational background, I feel strongly the knowledge, and experience accrued through my own extensive hands-on experience far outwieghs any piece of paper. I have spent countless hours learning, experimenting, and building projects across multiple engineering domains. Over time developing and refining the practical skills that have led to my current level of expertise in software development, embedded systems, robotics, electrical engineering, and AI integration. I pride myself on creating complete systems end-to-end, from hardware prototyping, custom app, website development, and AI integration. I have a strong track record of designing, building, and deploying complex systems that work reliably in real-world environments. My engineering background spans mechanical, electrical, and software domains, allowing me to solve problems holistically and design solutions that work reliably in the real-world. I have built custom drones, designed KiCad PCBs, programmed STM32 microcontrollers, developed AI pipelines using ONNX models, and engineered multi-modal applications with Python and JavaScript. My recent project, Re-Hardwire, demonstrates my ability to architect full-stack applications with integrated AI systems. I designed the routing engine, implemented ONNX-based TTS pipelines, built trauma-informed UX flows, and managed multi-OS development environments including WSL2, Linux, and Windows. I am highly persistent, self-directed, and comfortable learning new technologies quickly. I thrive in environments where engineering challenges span multiple disciplines and where the goal is to build systems that are robust, maintainable, and thoughtfully designed. Thank you again for your time and i hope this letter found you in good spirits. Sincerely, Michael Gallegos
